

Sri Lanka's First CarbonConscious® Company

A SNAPSHOT

* One of the leading apparel manufacturing facilities of the MAS group, Bodyline consulted CCC to assist them with their goal of becoming more sustainable. The secondary objectives included the need to minimise operational costs and maximise efficiency. Bodyline also envisioned the implementation of an overall 'green' strategy to reinforce their commitment to being more sustainable.

THE OUTCOME

- * CCC carried out a detailed GHG assessment of Bodyline's operations to analyse all 3 scopes of their carbon footprint as the initial step.
- * CCC facilitated the setting of a management green team, and worked with it to develop an overall green action plan. The 3 year programme set up by CCC was designed to mitigate carbon emissions, while looking at renewable energy and energy saving projects.
- * This extended commitment resulted in the company being recognised as the country's first CarbonConscious® Company
